Mitch,

I wanted to thank you for the outstanding job your company did on the Edwards Tracon slat wall installation. You yourself made multiple trips during the planning stages to ensure we had a quality project which was installed properly and on time. Your technicians worked well with our engineering group, my technicians, and the other contractors during the demolition of the old cabinets and consoles and the installation of the new ones. Your patience and diligence in working around the schedule of the controllers and my technicians was greatly appreciated. You produced a quality product for us, ensured we had exactly what we needed and produced a product that conformed to our high standards. You checked with us all along the way to ensure the project went well and according to our statement of work. The consoles and cabinets were exactly what we needed and the quality is evident. It was a professional, respectful and quality experience from start to finish and I want to express my appreciation for that.
